

**PROJECT** Airtek Industries

**BUILDING OWNER** Airtek Industries  
P.O. Box 466  
Irwin, PA

**AREA** Two Thousand One Hundred Three Square Feet

**DESCRIPTION** Multiple roof leaks were being experienced on this twenty year old, exposed fastener metal roof system. Previous applications of an acrylic coating were first pressure washed off to assure 100% adhesion of the new coating system. Each individual fastener head and metal panel over lap were first treated with Truco manufactured "Super Seam Sealer" as per the manufacturers specifications. Translucent fiberglass skylight panels were treated with #7145 clear rubber coating. Two applications of #7140 rubberized coating were then installed at a total coverage rate of 3 gallons per 100 square feet to complete the project. The building owner then received a ten-year leakage warranty from Truco, the coating manufacturer.

**ARCHITECT/SPECIFIER** Tuscano-Maher Roofing, Inc.
