

PROJECT S.W Jack Drilling

BUILDING OWNER S.W. Jack Drilling.
Jack Drive
Indiana, PA

AREA Twenty Thousand One Hundred Square Feet

DESCRIPTION Periodic roof leaks were causing the fiberglass insulation directly under the metal panel roof to retain moisture for long periods of time. This moisture was then causing the metal roof panels to rot from the inside out at many fastener heads.

At each of these fastener heads, sheet metal blanks were sealed to the roof using Truco #7174 trowel grade rubberized sealant and polyester fabric to assure that future leakage problems were eliminated. The rubberized coating system was then installed before the 10 year manufacturers leakage warranty was issued.

ARCHITECT/SPECIFIER Tuscano-Maher Roofing, Inc.
