

TUSCANO-MAHER ROOFING, INC.

PROJECT Allegheny Plaza

BUILDING OWNER Allegheny Plaza Associates
Jericho, NY 11753

AREA Sixty-Nine Thousand Five Hundred Square Feet

DESCRIPTION The existing roof on this strip shopping center was removed to reveal the steel deck. New cast iron drains were installed in several places to relieve areas of ponding water. One layer of 1" fiberboard insulation was secured to the metal deck. Tapered crickets were installed between the drains to facilitate better drainage.

The roof system was comprised of 3 plies of Type IV felt set in hot asphalt. The roof was then flooded with hot asphalt and gravel was embedded in the hot bitumen to provide ultra violet resistance and foot traffic protection.

New aluminum scuppers, conductor heads, and down spouts were fabricated and installed. Finally a new 24 gauge steel coping cap was installed.

SPECIFIER Tuscano-Maher Roofing Inc.
