

PROJECT Best Buy - Greensburg

BUILDING OWNER Best Buy
Eden Prairie MN, 55440

AREA Thirty-Three Thousand Two Hundred Square Feet

DESCRIPTION This project was a combination roof renovation and addition. The areas of existing roofs were recovered while the new areas started from a bare metal deck. The areas that were recovered first had a layer of 1.5" isocyanurate insulation fastened through the existing roof and into the steel deck below. The new construction areas received a similar application of isocyanurate insulation. After the isocyanurate insulation was installed a new .045" PVC roof by Genflex was mechanically attached to the metal deck. All the seams were heat welded and the walls were flashed using the same field sheet set in bonding adhesive.

A new Bilco Roof Hatch was installed. PVC coated metal was fabricated for all terminations and secured to the roof system.

ARCHITECT/SPECIFIER Tuscano-Maher Roofing Inc.
