

PROJECT Edge Chiropractic Clinic

BUILDING OWNER Dr. Carl Edge
1211 South Main St.
Greensburg, PA. 15601

AREA Four Thousand Eight Hundred Forty Three Square Feet

DESCRIPTION This was another new construction project with a construction schedule dictating our crews would install all roofing in the coldest months of the year. Our commercial roofing crew installed a single ply membrane roof on the low slope center section of the building, not visible from the ground.

On-site roll formed, double rolled standing seam panels were custom fabricated and installed on all steep slope roof planes and the vertical back wall, from the brick line up. Termination flashings between the metal panels and the single ply membrane were designed to allow for low slope reroofing several times in the life of the metal panel roof.

One-piece vented soffit / fascia, integrated gutters, rain water conductors, edge flashings, hip and ridge caps, and vented counter flashings were designed and fabricated in our sheet metal shop by skilled craftsmen. A color matched, mechanically clamped, snow retention system was installed at all eaves edges.

ARCHITECT/SPECIFIER The Lettrich Group- Donald Lettrich, RA.
1225 Wellington Square, Suite 306
